

Aluminium Cargo BAR

The aluminium cargo bar is a telescopic bar that allows you to secure loadings horizontally or vertically inside containers (dry or reefer ones).

You can easily fit it thanks to its sliding handle which allows to adjust desired length before proceeding in tightening to assure the efficient holding on each container side to avoid any movement from the blocked loading (pallets, boxes).

Its removable skates allows different positions (straight, diagonal) while assuring its good stability, and their rubber material prevents each container side on which you put it from any distortion.

Characteristics :

- Aluminium et steel
- Rubber endings / removable skates
- With sliding handle to adjust requested length before final tightening
- Dimensions : from 2 350 mm to 2 650 mm
- Weight: 4 kg
- Packaging: per unit or package of 4 pcs
