Single Use Anti-theft handle

BJ Services single use anti-theft handle is an anti-theft system that you can only use one time, made for containers or trailers transports. It is only made of 2 strong metal bars secured together with a pin that you can only remove thanks to an electric disc cutting device, certifying that you cannot replace it after destruction.

If hardened steel surface gives this handle a breaking load of more than 3,5 tons.

Thanks to its sliding system, this handle can be adjusted at its best to locking bars, and then can be applied on all «ISO» container types.

The pin has just to be inserted inside the black locking mechanism and hardly pushed with the finger. When inserted, you cannot remove it without cutting it.

BJ Services' single use anti-theft handle is a compact product, especially studied not to disturb containers' loading on vessels. Its single use is interesting for containers you need to protect at exporting without back possibility.

Characteristics :

- Surface hardened steel handle
- Engraved number on locking system
- Packaging : per unit or boxes of 10 pcs

The handle (x1)	
Weight	1,5 kg
Minimum gap	31 cm
Maximum gap	44,5 cm
